Other activities In an effort to empower the community, the group hosts several successful social events. The largest of these events is a yearly Kisan Sabha (peasant protest), a program that raises awareness about their issues in the area. The organization works to fight environmental damage, and protect the region's heritage. They are also a part of the Tamil Nadu Natural Resource Development Corporation (TNNRDC), which works to connect farmers with sustainable land development. As a grassroots organization, they have worked with the government to help developing a national reserve of parched land which could be used for their cause. An electrochemical method was developed for the detection of dopamine (DA), DA-containing molecules and DA-acetylcholine (DA-ACh) complexes based on functionalized graphene quantum dots (GQDs). Two types of GQDs with carboxyl and amino functionalities were fabricated by citric acid and 3-aminopropyltriethoxysilane (APTES) hydrolysis. The carboxylated GQDs showed a high electrocatalytic response toward the oxidation of DA, dopamine-3,4-dihydroxyphenylacetic acid (DOPAC), 3,4-dihydroxyphenylalanine (DOPA) and DA-ACh complexes. Moreover, the amino functionalized GQDs showed a good electrocatalytic response for the reduction of DA-ACh complexes. Based on this, a sensitive electrochemical biosensor was constructed for DA, DOPAC, DOPA and DA-ACh complexes detection. The method possessed high sensitivity for DA, DOPAC, DOPA and DA-ACh complexes with detection limits of 0.15 nM, 1.6 nM, 8.3 nM and 9.5 nM, respectively. These results suggested that the electrochemical method provides an effective alternative for the electrochemical detection of DA-ACh complexes. Murphy Brothers Jacob and 82157476af
