(Licznik. License key, License Generator and License Key.. Licznik. Feb 4 2017 10:16 PM. Generating, deleting, storing the license key and so on was a lot of complication and I thought that new versions of the software Q: When is it good to override magic methods? I've inherited a piece of code that does something like this: if(! \$object->isAtLeast('News')){ // do something return false; } I've converted the method to an instance method: public function atLeast(\$value){ return

\$this->isAtLeast(\$value); } Is this an acceptable change? Is there anything wrong with overriding magic methods? I'd rather keep this kind of code if possible, but I'm not really sure where I'm allowed to mess with the language. A: Is this an acceptable change? Yes, that's perfectly fine. Anytime you need to override a getter/setter in PHP, you can do so, and do exactly what you did in your question. Just be sure to always call the parent method, not the child method. The methods used in the conditional logic aren't magic in any way; they're completely normal, publicly readable methods on the object. Is there anything wrong with overriding magic methods? There is no real difference between overriding a normal method versus overriding a magic method, so there is no reason to worry about them at all. Q: Logic - For all or some? Say I have a class Dog. I would like a method to print out the dogs name and age, based on 3 variables. I tried something like this: if ((\$_GET['dog'] == 'great dane') || (\$_GET['dog'] == 'chihuahua') || (\$_GET['dog'] == 'corgi')) { echo \$dog->getName(); echo \$dog->getAge(); } What's the more appropriate way to do this? A: The assignment is not what causes the problem, but the logic. Your method only has to check the \$_GET variables, but if they are true or false it still needs to evaluate the if statement. It has to do that for each value.

v-all of these are for used at a car dealership Also the scan tool is great. Sep 29, 2017 I had my car in the shop for a day, so I bought a CARPCP5000, and it's great. Jun 10, 2017 I would recommend this for your use as a temp fix. Also, this will work with any LEFT SIDE CAN BUS VAN, INCLUDING LEFT SIDE TAILGATE VAN. TAKING OUT the plastic clamshell type covering on the back of the dash and taking the right hand dash panel out, you should have access to the VIN, E-MARK, WIRELESS SATELLITE RADIO, CD PLAYER. VISIBLY SEE THE FLASHING RED LED on the left side readout.

Magnetar is a free OBD2 car remote. Just download the magnetar.apk or magnetar-gen1.apk from here: May 5, 2017 Vote this Up Vote this Down Reply. Nyo 2006, Licznik 49a, Carculator, Boomerang Sep 27, 2016 Tampered with someone else's car, i was thinking about selling them my old car, so i bought the FOBB-1000 and did a scan. Dec 6, 2015 I had similar trouble too with these. Just go to the link and download the "Install.apk" file it will install the apk onto your phone. After that is installed put it into your phone, and download the "FobDriver6.0.2.apk" file and do the same thing. Then open up your messaging app and click "send". It will take all the data you sent on the car and it will put it on your car. Also works on your phone so you can call your dealership and talk to them over your car. That is the most basic way i know of doing it. Oct 18, 2015 Voodoo Jumper is a great tool to use to check VIN and E-MARK. One of the best selling tools out there. It will bring up a lot of info about the VIN and E-MARK. Nov 4, 2015 I use voodoo jumper and carculator f678ea9f9e
